HOW WE WORK

Jabil’s customer-centric approach is the cornerstone of how we work. Customer teams are led by business unit leaders who know your company and serve as a single point of contact and accountability — even when your business is operating at multiple Jabil locations.

It is through our unique workcell model that Jabil manages all aspects of our customers’ business — from planning and procurement to manufacturing and quality control. Accountability is managed at the business unit level rather than at the factory level as in a typical contract manufacturing business model. Our operations are centered on you to ensure success.

Our Program Management Organization (PMO) creates value by bringing simplicity to complex engagements. Their mission is to provide extraordinary project management capabilities which instill stakeholder confidence and ensure overall success.

INTELLIGENT DIGITAL SUPPLY CHAIN

• Industry-leading practitioners
• Commodity sourcing experts
• Best-in-class Procurement Intelligence Platform
• Jabil InControl™ — Award-winning supply chain decision support platform
• Network Optimization & Analytics Platform
• Purchasing centers of excellence
