ABSOLUTE MAXIMUM RATINGS

Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

(1) Average launch power, each lane (min) is not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.

(2) An average launch power of -3.3 dBm corresponds to an OMA of -0.3 dBm with an infinite extinction ratio.

(3) Transmitter reflectance is defined looking into the transmitter.

(4) RIN_{xxOMA}, with "xx" referring to the value for Optical return loss tolerance (max).
